# SERIES: AMT22 | DESCRIPTION: MODULAR ABSOLUTE ENCODER

## FEATURES
- patented capacitive ASIC technology
- low power consumption
- full duplex Serial Peripheral Interface (SPI)
- 12 or 14-bit absolute position
- checksum bits for error detection
- configuration and firmware updates via AMT Viewpoint™ software
- digitally settable zero position
- compact modular package with locking hub for ease of installation
- -40 ~ 105°C operating temperature

</tbody>
</table>

**Notes:**
1. See Microchip documentation for more details.
2. This is the time it takes to load the most current position into the SPI buffer which prevents multiple read/response commands from being required.

---

![Timing Waveform](image)

---

Values K1 and K0 in the response are checkbits. The checkbits are odd parity over the odd and even bits in the position response shown in the equation below. The checkbits are not part of the position, but are used to verify its validity. The lower 14 bits are the encoder position.

**Example:**
Full response: 0x61AB
14-bit position: 0x21AB (8619 decimal)

**Checkbit Formula**

Odd: \( K1 = \neg(H5^H3^H1^L7^L5^L3^L1) \)
Even: \( K0 = \neg(H4^H2^H0^L6^L4^L2^L0) \)

From the above response 0x61AB:
Odd: \( 0 = \neg(1^0^0^1^1^1^1) = \text{correct} \)
Even: \( 1 = \neg(0^0^1^0^0^0^1) = \text{correct} \)

For 12-bit applications \( L0 \) and \( L1 \) are always 0. Because the low two bits are 0, 12-bit data will need right-shifted two bits. The checkbit calculation remains the same and unaffected.
SERIAL INTERFACE (CONTINUED)

Commands:

Read Position
Hex command sequence: 0x00 0x00

The command to read position is 0x00, 0x00 because the encoder will always respond with the current position when SPI is accessed. The encoder observes the second byte for extended commands.

Extended Commands:

Reset Encoder
Hex command sequence: 0x00 0x60

The encoder responds with the current position over the transmission then immediately resets. Observe the power on time when using this command. Encoder must be stationary to power back on.

Set Zero Point
Hex command sequence: 0x00 0x70

The encoder responds with the current position over this transmission then saves the current position into memory and performs a reset. Encoder must be stationary for this command. Observe the power on time when using this command.

AMT VIEWPOINT™ OPERATION

The AMT22 encoder operates in two modes: programming, and SPI mode. To enter programming mode for use with AMT Viewpoint™ the slide on the bottom of the encoder must be moved to the programming position. Slide the switch to the left position before connecting encoder to AMT Viewpoint™. Once configuration in AMT Viewpoint™ is completed, disconnect encoder and return switch to the standard run mode position before connecting encoder to system. Switch must be in proper mode for programming or SPI before power is connected to device.
PART NUMBER KEY

For customers that prefer a specific AMT22 configuration, please reference the custom configuration key below.

**AMT22 XX - XXXX - X**

- **Base Number**
- **Orientation:**
  - 2 = Radial
  - 3 = Axial
- **Absolute Resolution:**
  - A = 12-bit
  - B = 14-bit
- **Bore Diameter:**
  - 2000 = 2 mm
  - 3000 = 3 mm
  - 3175 = 3.175 mm (1/8”)
  - 4000 = 4 mm
  - 4760 = 4.76 mm (3/16”)
  - 5000 = 5 mm
  - 6000 = 6 mm
  - 6350 = 6.35 mm (1/4”)
  - 8000 = 8 mm
- **Mounting Base:**
  - S = Standard
  - W = Wide

AMT22-V KITS

In order to provide maximum flexibility for our customers, the AMT22 series is provided in kit form standard. This allows the user to implement the encoder into a range of applications using one SKU#, reducing engineering and inventory costs.

**ORDERING GUIDE**

AMT22XX-V

- **Orientation:**
  - 2 = Radial
  - 3 = Axial
- **Absolute Resolution:**
  - A = 12-bit
  - B = 14-bit

ASSEMBLY PROCEDURE

STEP 1
1. Insert Tool A as a spacer that defines the distance to the mounting surface.
2. Slide appropriate sized Sleeve over shaft all the way down to Tool A.
3. Slide Shaft Adaptor over Sleeve.
4. Use Tool C to press Shaft Adaptor over Sleeve (ensure Shaft Adapter and Tool C spline alignment) until flush with Tool A.

STEP 2
1. Remove Tools A and C.
2. Place Base on motor, with Tool C used as a centering tool.

STEP 3
1. Align Tool C with flange on Base.
2. Slide Base and Tool C onto motor, centering onto the Shaft Adapter.

STEP 4
1. Fasten the Base on the motor (Tool C may need to be rotated to allow for some mounting configurations).
2. Remove Tool C.

STEP 5
1. Snap the Top Cover onto the Base, carefully observing that the teeth of the Shaft Adaptor align with the grooves in the hub.

* We recommend no more than three cycles of mounting and removal of the AMT top cover base. Multiple cycles of mounting and removing the top cover can cause base fatigue over time and affect encoder performance.

STEP 6
1. Make sure the snaps are fully engaged by pressing on the Hub with the reverse side of Tool C.
2. When assembly is finished, the Shaft Adaptor, Sleeve and Rotor Hub should all be flush with the Motor Shaft rotating freely.
CUI Devices offers a one (1) year limited warranty. Complete warranty information is listed on our website.

CUI Devices reserves the right to make changes to the product at any time without notice. Information provided by CUI Devices is believed to be accurate and reliable. However, no responsibility is assumed by CUI Devices for its use, nor for any infringements of patents or other rights of third parties which may result from its use.

CUI Devices products are not authorized or warranted for use as critical components in equipment that requires an extremely high level of reliability. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
